# CRUD

## Technical Point

---

Three elements are particularly difficult to put in place:

- Category recursivity

## Technical Point

---

Three elements are particularly difficult to put in place:

- Category recursivity
- The flexibility of the search bar results (search approximations, weight)

## Technical Point

---

Three elements are particularly difficult to put in place:

- Category recursivity
- The flexibility of the search bar results (search approximations, weight)
- Grouping of search criteria in a single search bar (parsing of the user query)

## Technical Point

---

Three elements are particularly difficult to put in place:

- Category recursivity
- The flexibility of the search bar results (search approximations, weight)
- Grouping of search criteria in a single search bar (parsing of the user query)

The team therefore advises you to save these elements for the end of the project

# Objective

---

At the end of the project you will know how to develop an e-commerce project from 0.

# Objective

---

At the end of the project you will know how to develop an e-commerce project from 0.

And that's about all there is to know about web development.

## Objective

---

At the end of the project you will know how to develop an e-commerce project from 0.

And that's about all there is to know about web development.

- Next steps: gain in productivity and efficiency, and reduce development errors

## Objective

---

At the end of the project you will know how to develop an e-commerce project from 0.

And that's about all there is to know about web development.

- Next steps: gain in productivity and efficiency, and reduce development errors
- Now aim the frameworks!
